

Viralized File Brander Usage Guide

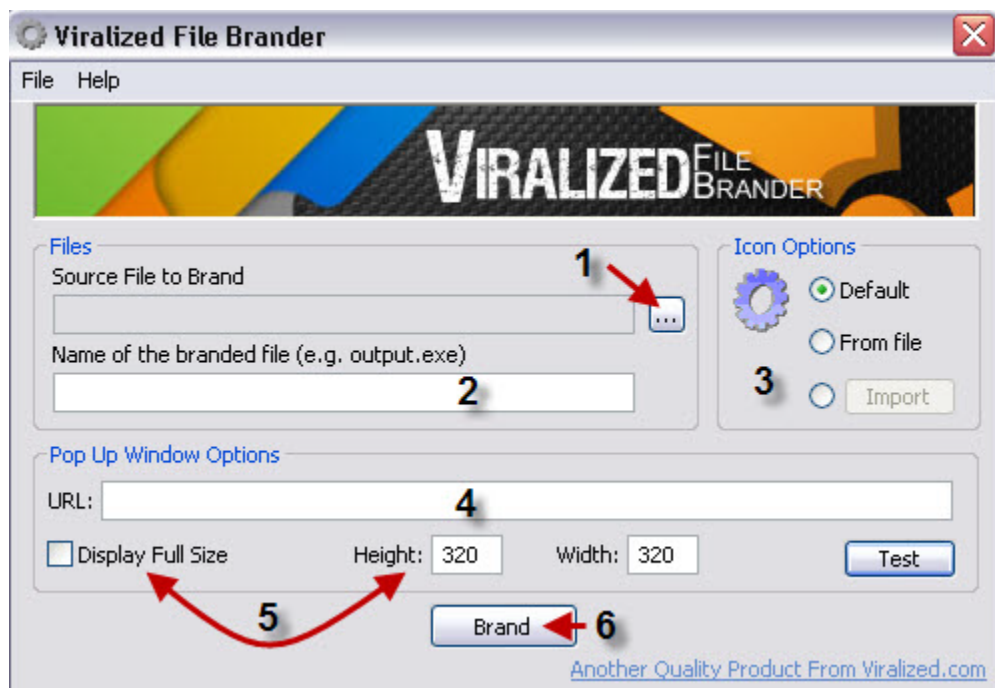

Viralized File Brander Usage Guide

Installation is not needed for this software. It can run directly by launching: **ViralFileBrander.exe**

Before using, it's best that you have the pre-requisites below:

- **Window 98 or above PC (This is a PC desktop software)**
- **Microsoft .NET framework installed on your computer. You can also download it for free here: <http://urlfuse.com/net>**

After launching the software, you will see the interface below:

To start your branding projects:

1. Click on the button 1 as in the image above to **locate the file** you would like to brand.
2. Enter the **name of the newly branded file**, for example: **YourNewBrandedFile.exe** with no spaces in between and it should end with an **.exe extension**
3. Next **select the icon** that you would like to use for the branded file. You can select from three options:
 - a) **Use the default icon**
 - b) **Inherit the icon from the file to be branded**
 - c) **Import/use a customized icon .ico file**
4. Then enter the URL to the page that you would like to open once the branded file is launched. For example
 - a) **You can use an opt in page: (<http://yourdomain.com/subscribe.html>) or**

b) a link to a product that you are an affiliate of, with your affiliate ID
(<http://jvproduct.com/?affid>)

5. Select the **size** of the window to display your web page.
6. **Click brand to finish branding.** The branded application will be in the **same folder as the original unbranded file.**

That's it!

Most importantly, **always test every feature fully** before you use the product.
